

1. Data Import:

- o Import List of Orders.csv into Power BI.

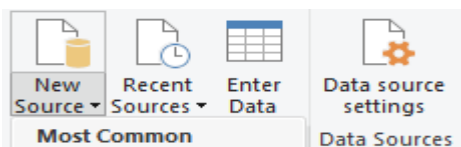

Imported list of orders.csv by Get Data Option.

- o Open the list of orders in the Power Query Editor using the Transform Data option.

- o Import Order Details.csv and Sales Target.csv into Power Query Editor.

2. Row Limiting & Data Types:

- o Restrict the List of Orders table to the first 500 rows.

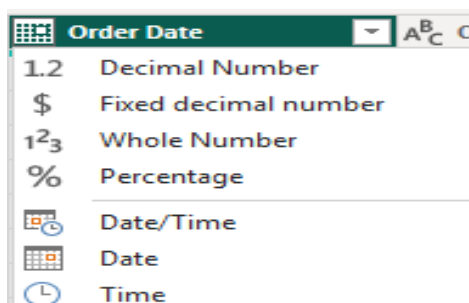

Remove Bottom Rows

Specify how many rows to remove from the bottom.

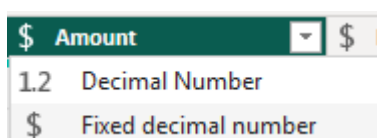

Number of rows

60

- o Set the Order Date column to the Date data type.

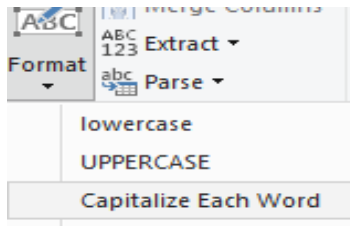

- o Change the Amount and Target columns to fixed decimal numbers.

3. Text Formatting:

- o Format the CustomerName column to proper case to ensure consistent capitalization.

4. Column Creation:

- o Merge the City and State columns to create a new column named Location in the format:
City, State

Merge Columns

Choose how to merge the selected columns.

Separator
Comma

New column name (optional)
Location

- o Create a custom column named Profit Margin calculated as: Profit / Amount (expressed as a percentage)

New column name
Profit Margin

Custom column formula ⓘ
= [Profit]/[Amount]

5. Conditional Column:

- o Add a conditional column named Profit Status based on:

- Profit < 0 → Loss
- Profit = 0 → Break-Even
- Profit > 0 → Profit

New column name
Profit Status ⓘ

	Column Name	Operator	Value ⓘ		Output ⓘ
If	Profit	is less than	0	Then	Less
Else If	Profit	equals	0	Then	Break-Even
Else If	Profit	is greater than	0	Then	Profit

6. Merging Data (Joins)

o Merge the List of Orders and Order Details tables using Order ID.

o Name the merged output table as Orders Data.

Select tables and matching columns to create a merged table.

Orders Data

Order ID	Order Date	CustomerName	State	City	Location	Order Details.Amount
B-25601	01-04-2018	Bharat	Gujarat	Ahmedabad	Ahmedabad, Gujarat	1,275.00
B-25601	01-04-2018	Bharat	Gujarat	Ahmedabad	Ahmedabad, Gujarat	66.00
B-25601	01-04-2018	Bharat	Gujarat	Ahmedabad	Ahmedabad, Gujarat	8.00
B-25601	01-04-2018	Bharat	Gujarat	Ahmedabad	Ahmedabad, Gujarat	80.00

Order Details

Order ID	Amount	Profit	Quantity	Category	Sub-Category	Profit Margin	Profit Status
B-25601	1,275.00	-1,148.00	7	Furniture	Bookcases	-90.00%	Less
B-25601	66.00	-12.00	5	Clothing	Stole	-18.20%	Less
B-25601	8.00	-2.00	3	Clothing	Hankerchief	-25.00%	Less
B-25601	80.00	-56.00	4	Electronics	Electronic Games	-70.00%	Less
B-25602	168.00	-111.00	2	Electronics	Phones	-66.10%	Less

Join Kind

Full Outer (all rows from both)

7. Handling Missing Data & Duplicate Data

- Identify missing values across all tables.
- Define and apply appropriate strategies such as:
 - o Replacing missing values
 - o Removing records
 - o Retaining nulls with justification
- Identify duplicate rows and define a suitable handling strategy based on business logic.

Order ID	Order Date	CustomerName	State	City
Valid 100%	Valid 100%	Valid 100%	Valid 100%	Valid 100%
Error 0%	Error 0%	Error 0%	Error 0%	Error 0%
Empty 0%	Empty 0%	Empty 0%	Empty 0%	Empty 0%

8. Sorting and Filtering Data

- Sort records in the Orders Data table by Order Date in descending order.

A↓ Sort Ascending

Z↓ Sort Descending

- Apply filters to analyze orders from a specific state (e.g., Tamil Nadu).

Text Filters

tami

☒ (Select All Search Results)

☒ Tamil Nadu

9. Grouping and Aggregating Data

- Duplicate the Order Details table and perform the following:
 - Count of Order ID
 - Average Profit by Category
 - Total Amount by Sub-Category

Sub-Category

New column name

Total Amount

Operation

Sum

Column

Amount

- Duplicate the Sales Target table and aggregate the total Target by Month of order date.

Click Date > Month > Name of Month

10. Data Modeling:

- Established a relationship between:
 - List of Orders and Order Details using Order ID
- Established a relationship between:
 - Order Details and Sales Target using Category

2. Managed Relationships to ensure relationships are active and correctly defined.
